1.0 Executive Summary

Shaw Environmental, Inc. (Shaw) is pleased to present this Phase I Environmental Site Assessment (Phase I ESA) report. Below is an overview of the project, including a summary of our significant findings:

Property name:		Boise Paper Cottonwood Fiber Farm	
Property address (or other legal or physical Property location description):		Approximately 1,894 acres as depicted on Figure 1	
User of this report:		Boise White Paper LLC	
Reason for requesting the Phase I ESA:		Pre-Divestiture Due Diligence	
Date of site reconnaissance:		February 15, 2007	
Property description:		The Property consists primarily of a cottonwood farm cultivated for wood fiber and pulp. No structures were present on the Property at the time of the site reconnaissance. The northern portion of the Property exists as undeveloped, non-cultivated land. The Property is improved with cultivated areas, dirt farm roads, 10 irrigation wells, pump and filter stations, and a small water reservoir.	
Property operations:		Agricultural operations consisting of the cultivation and harvesting of cottonwood trees on a five to seven year production cycle.	
Summary of Property History			
From at least 1931 to at least 1968	Based on historic aerial photographs and Metskers Maps, the Property appears to have been undeveloped natural land.		
From at least 1978 until at least 1989			
From at least 1996 to the present			

Conclusions and Recommendations

Conclusions

Shaw has performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527 of the approximate 1,894-acre Boise Paper Cottonwood Fiber Farm in Wallula, WA (the Property). Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence recognized environmental conditions in connection with the Property.

Recommendations for Additional Investigation

Based on the findings of this Phase I ESA, Shaw does not recommend additional investigation to detect the presence or likely presence of hazardous substances or petroleum products.

2.0 Introduction

Project Environmental Professionals		
Environmental Professional:	D. Howe Gates	
Person(s) conducting site reconnaissance and interviews (if different from the Environmental Professional)	D. Howe Gates	
Senior Report Reviewer:	Megan Coracci	

Résumés or other biographical sketch of the Environmental Professional(s) involved in the preparation of this report are included in Appendix A.

Scope of Services

Shaw conducted the work in accordance with the following specifications (hereinafter collectively referred to as the "Scope":

ASTM International (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, ASTM Designation E 1527-05 (ASTM E1527), and ASTM E2247-02 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process for Forestland and Rural Property.

Additional services requested outside the ASTM E1527: None

Limitations to this assessment are presented in Appendix B of this report.

Objective of this Phase I ESA:

The objective of this Phase I ESA was to identify, to the extent feasible, recognized environmental conditions (RECs) as defined by ASTM E1527.

Exceptions to, or deletions from, the above referenced Scope of Work, including significant data gaps:	None
Weather-related property restrictions:	None
Facility access restrictions:	None, however due to the size of the Property Shaw did not examine all areas of the Property. Shaw traversed the outer Property boundaries and representative interior cross sections of the Property.

3.0 Property Description

3.1 Property Location

Property name:	Boise Paper Cottonwood Fiber Farm
Property address (or other legal or physical Property location description):	Based on information obtained from the Walla Walla County, WA. Assessors office, Shaw has identified the below listed parcels, north to south, which comprise the Property. In total, 1,894.47 acres are included.
	Parcel No.: 310835410003, consisting of 134.3 acres of commercial land. This parcel is located at the northern most portion of the Property and is not currently in use.
	Parcel No.: 310702000001, consisting of 625.41 acres of agricultural land. The county identifies that 297 acres of this parcel are irrigated and 328.41 acres are dry.
	Parcel No.: 310711000001, consisting of 649.22 acres of agricultural land. The county identifies that 1 acre is utilized for a home site, 488 acres are irrigated, and 160.22 acres are dry.
	Parcel No.: 310714110007, consisting of 160 acres of agricultural land. The county identifies that 126 acres are irrigated and 34 acres consist of range land.
	Parcel No. 310714410001, consisting of 160 acres of agricultural land. The county identified that 142 acres are irrigated and 18 acres are range land.
	Parcel No. 32078310003, consisting of 165.54 acres of agricultural land. This parcel is located to the south east and separate from the above identified parcels. The county identifies that 139.54 acres are irrigated and 26 acres are designated as waste.
	Figures 1 and 2 provide the estimated boundaries of the Property.

Figure 1 in Appendix C presents a Property Location Map, (USGS 7.5-minute Quadrangle or similar) showing the location of the Property.

3.2 Property Description

Property description (acreage, structures, roads, and other improvements):	The Property consists primarily of a cottonwood farm cultivated for wood fiber and pulp. No structures were present on the Property at the time of the site reconnaissance. The northern portion of the Property exists as undeveloped, non-cultivated land. The Property is improved with cultivated areas, dirt farm roads, 10 irrigation wells, pump and filter stations, and a small water reservoir.
Estimated percentage of property covered by buildings and/or pavement:	0 percent

Property operations:	Agricultural operations consisting of the cultivation and harvesting of cottonwood trees on a five to seven year production cycle.
Type of sewage disposal system (and age):	None
Potable water source:	None
Electric utility:	PGE; electrical transmission lines provide power to pump stations, booster pump stations, irrigation and filter stations.
Natural gas:	None
Energy source(s) for heating:	None
Current uses of adjoining properties,	
North:	A feed lot and waste water lagoons owned and operated by Simplot Feeders is located to the northwestern of the larger section of the Property. Agricultural land is north of the smaller parcel
South:	Cultivated agricultural land is south of both sections of Property.
East:	Cultivated agricultural land is east of both sections of Property
West:	Cultivated agricultural land is west of the smaller parcel of Property. West of the larger parcel is the town of Wallula, agricultural lands, a rail line, a fumigation chemical storage facility owned and operated by Tessenderlo Kerley Inc., and waste water lagoons.

Figure 2 in Appendix C presents a not-to-scale site plan of the Property depicting important Property features and relevant observations. Site photographs are provided in Appendix D.

3.3 Physical Setting of Property

Topography:	The Property is characterized by rolling hills and ranging in elevation from approximately 400 to 500 feet above sea level.	
Geology	According to the USGS Soil Survey of Walla Wall County, dated February 1964, soils mapped beneath the property include the following:	
	Active dune land	
	 Adkins loamy find sand, 0 to 15 percent slopes, eroded 	
	 Hezel loamy find sand, 0 to 15 percent slopes, eroded 	
	Hezel-Quncy complex, eroded	
	Quincy Duneland complex	
	 Quincy fine sand, 0 to 30 percent slopes, eroded 	
	 Quincy loamy fine sand, moderately deep over coarse sand, 0 to 8 percent slopes, eroded 	
	 Quincy loamy fine sand, 8 to 15 percent slopes, eroded 	
	The Property is underlain by uncolsolidated rock aquifers, which consist of younger, coarse- grained deposits of chiefly stream or glacial origin and older, fine-grained deposits of chiefly	

	lake, volcanic, or eolian (wind blown) origin. In places, older unconsolidated deposits contain thick beds of volcanic ash; in other places, these deposits contain thin (a few feet to a few tens of feet) flows of basaltic or silicic volcanic rocks. Older unconsolidated deposits usually become increasingly compacted with depth.
Hydrogeology:	Unconsolidated-deposit aquifers, which consist primarily of sand and gravel, are the most productive and widespread aquifers in Idaho, Oregon, and Washington. These aquifers are prevalent along present and ancestral stream valleys and in lowlands that are associated with structural or erosional basins. The unconsolidated deposits are mostly alluvial deposits, but in places, they consist of eolian, glacial, or volcanic deposits. Alluvial deposits consist primarily of well-sorted particles that range in size from clay to boulders. The finer particles-clay and silt-generally form confining units, whereas the coarser particles-primarily sand and gravel with some cobbles and boulders-form productive aquifers. Eolian deposits, or loess, consist chiefly of clay, silt, and fine sand. Although loess is well sorted, it does not form productive aquifers because it is fine grained, usually unsaturated, and commonly is only a veneer overlying other rocks. Glacial deposits consist chiefly of mixtures of particles that range in size from clay to boulders. These deposits can be either well sorted where they were deposited by glacial meltwater (glacial outwash) or unsorted where they were deposited at the margins of the ice (glacial till). Where these deposits are well sorted, they form productive aquifers.
	Typically, unconsolidated deposits along stream valleys consist chiefly of sand and gravel that form productive aquifers. The thickness of the deposits along present stream valleys commonly is less than 250 feet.
	The Property is located in an area of Walla Walla County that has been used for agricultural purposes since at least the 1970s. Mr. Alan Kottwitz of Boise Paper informed Shaw that the quality of groundwater beneath the Property is poor due to the presence of nitrates. The groundwater is reportedly not suitable as a source of potable water.
Flood plain:	The Property is not located in designated flood plain areas.
Depth to groundwater:/ gradient:	According to local well logs, groundwater wells located in the Property vicinity have identified groundwater to be present at depths ranging from 20 to 70 feet below ground surface. Groundwater gradient is expected to be to the east-southeast, toward the Columbia River.

Unless otherwise stated, groundwater gradient was estimated based on Property and regional topography and surface features such as streams, lakes, and wetlands.

4.0 User-Provided Information

Before initiating the Phase I ESA, Shaw discussed the project with representatives of the User of this report as described in Section 1.0. The table below presents a summary of the information provided by the User that was considered by the User as material to RECs in connection with the Property.

Title records:	None provided
Environmental liens:	None provided
Activity and use limitations (deed restrictions, etc.):	None provided
Knowledge of Property price reductions (devaluation) below fair market value due to environmental considerations:	None provided
Are you aware of any pending, threatened or past litigation relevant to hazardous substances or petroleum products in, on, or from the Property; administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Property; or notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products?	No
Property plans and/or descriptions:	Shaw was provided a prior report as described below that contains a partial diagram of the boundaries of the Property.

Previous environmental reports:

Report: Transaction Screen Process

Fiber Farm, Timberland Region for Boise Cascade Corp

Date: July 2004

Prepared by: URS Corporation (URS)
Prepared for: Boise Cascade Corporation

This report was prepared by URS and inclusive of two different properties including a substantial portion of the Property and other land located in Oregon which was part of this assessment. The northern uncultivated portion of the Property was not included in the URS assessment. The property was referred to by URS as the Fiber Farm Timberland (FFT) region. URS reported that the property was managed as agricultural land for the growth and harvest of cottonwood trees; the pulp of which was used in paper production. According to URS the FFT had been owned or leased by Boise since 1990 and had been managed for cottonwood growth since that time. Excerpts of URS findings are as follows:

- Present or historical fueling operations and/or storage of regulated chemicals do not occur
 on the Property. There is no history of fuel spills incidents.
- Equipment used onsite includes harvesters, front-end loaders, chippers, and transports used to process standing trees into wood chips. Chips are transferred to the nearby Boise Wallula Mill. Harvesting equipment is stored and maintained off site.
- The FFT is designated as agricultural use and not subject to regulations associated with forestry practices.
- Woody debris is either removed from the property by contractors or managed locally.

- Most of the property is not fenced and there is minimal control to restrict public access to the property.
- Herbicides, pesticides, and fertilizers are applied on the property by licensed contractors. There is no incidence of past chemical spills occurring on the Property.
- 10 irrigation wells are present on the Wallula Farm
- Regarding ownership status, the northern 757 acres were purchased in 1990 from the Watts Brothers. The southern 396 acres were leased to purchase in 1994 and purchased in 2002 from Wilber Ellis.
- The property has historically been utilized as for agricultural purposes dating back to the 1990s. Past operations have utilized center pivot irrigation of crops including corn, wheat, potatoes and alfalfa. Circular irrigation systems were converted to drip lines, and booster pumps stations and filters were installed to supply water and fertilizer to the cottonwood fiber farm.
- The Property was not identified on reviewed federal, state, and local environmental regulatory agency databases. No other listed facilities were identified as likely to impact the Property.
- A mobile home structure was present on the Property utilized as an office with its own
 well and septic system. There were no recorded leaks or environmental hazards reported
 with the Wallula facility.
- Upon acquisition of the Property Boise replaced existing electrical. Equipment potentially
 containing polychlorinated biphenyls (PCBs) was tested for leaks and removed by
 contractors. URS observed no evidence of leaks or stains from electrical equipment
 associated with the Property.
- Multiple aboveground storage tanks (ASTs) were observed on the Property associated with fertilizer, pesticide, and herbicide application. No recognized environmental conditions were identified in association with the ASTs. No underground storage tanks (USTs) were identified on the Property.

URS concluded that, based on the initial screening process and limited site reconnaissance for the TSP, potential RECs were not identified within the fiber farm or adjacent areas that could impact the Property.

Actual, commonly known, or reasonably
ascertainable information or other knowledge
that may be material to RECs (describe):

None provided

5.1 Standard Environmental Records Sources

The regulatory agency database was obtained from Environmental Data Resources, Inc. (EDR), Report ID No. 01862525.1r. A complete copy of the database report as provided by EDR, including the date the report was prepared, the date the information was last updated, and the definition of databases searched, is provided in Appendix F.

The Property was not identified in any of the environmental databases accessed.

Based on the database assessment criteria presented in Appendix B, none of the remaining listed facilities were considered a REC, with the possible exception of the following:

Description of Regulatory Listing	Facility Name/Address	Federal or State Facility ID	Distance from Property (feet)	Direction from Property, Gradient	REC (Y/N)
PADS, FINDS, RCRA-LQG, TRIS, CERC-NFRAP, WA Manifest, Spills, UST	Boise Cascade Paper Division Wallula, also listed as Boise Paper Solutions Highway 12 & Highway 395 38381 West Highway 12	WAD009052432	Adjacent	West, downgradient	N

Comments: The facility was identified as a RCRA-LQG with six violations reported in 1991. The facility has reportedly achieved compliance on all violations. The facility was identified as a potential CERCLIS site in 1981, and a preliminary assessment was performed in 1985 to 1986. Following a site inspection in 1998 the facility was reclassified as "No Further Remedial Action Planned." The CERCLIS-NFRAP listing was archived in 1993. Several spills were reported at this facility, including a chlorine gas release which was reported in 2003 and a release into the Columbia River, which was also reported in 2003.

In addition to the listings described above, Boise Cascade, Boise Cascade Trucking Operations, Boise Cascade Paper Division Wallula, and Boise Cascade Recycling Operations were all identified in the "orphans" or unmappable database. The orphans summary is a list of facilities which cannot be mapped due to poor or insufficient address information. The orphans listings include identification in the spills, UST, AIRS, CSCSL NFA, VCP, and ICR databases.

While numerous listings were identified for the Boise Cascade site, this facility is located across Highway 12 to the west of the Property, at a substantially lower elevation and in an inferred downgradient position. Given the location and gradient of this facility in relation to the Property it is not considered representative of a REC.

LUST, UST, NPDES, RCRA- SQG, FINDS, TRIS, WA Manifests	Tyson Fresh Meats, also known as IBP Wallula, and Simplot Feeders 13981 Dodd Road	LUST Facility ID: 26453 WAD099143984	Adjacent	Northwest, inferred cross- gradient	N
--	---	--	----------	---	---

Comments: Several waste water lagoons associated with this facility are located adjacent to the northwest corner of the Property. The main operations of this facility are located several hundred feet further to the north of the Property, in an inferred cross-gradient position. A release from a UST was reported at this facility in September 1993 which reportedly impacted soil. The release was "reported cleaned up" in November 1993. The facility is identified as a RCRA-SQG with no reported violations. No other releases have been reported. Based on the closed regulatory status of the LUST incident and the inferred cross-gradient position of the facility relative to the Property this facility is not considered representative of a REC.

5.1.1 Local Fire Department Records

Agency Contacted (Name, Address, Phone Number)	Description of records
Walla Walla County Fire Department 200 S. 12th Ave. Walla Walla, WA 99362 (509) 527-4429	The Property does not have a physical address, and therefore Shaw was unable to search local fire department records for listings pertaining to the Property.

5.1.2 Local Health Department/ State Environmental Agency Records

Agency Contacted (Name, Address, Phone Number)	Description of records
Walla Walla County Health Department 310 West Poplar Street Walla Walla, WA 99362 (509) 524-2650	The Property does not have a physical address, and therefore Shaw was unable to search Walla Walla County Health Department records for listings pertaining to the Property.

5.2 History

The table below presents a summary of the operational history of the Property. The summary is an integration of the findings of the individual historical record sources presented in subsequent sections.

Summary of Property History		
Dates	Property Use	
From at least 1931 to at least 1968	Based on historic aerial photographs and Metskers Maps, the Property appears to have been undeveloped natural land.	
From at least 1978 until at least 1989	Based on historic aerial photographs, the Property appears either as undeveloped natural land or under agricultural cultivation with center pivot irrigation.	
From at least 1996 to the present	Based on aerial photographs, the Property appears as substantially under cultivation as a wood fiber farm. The northern most section of the property is no longer under active cultivation.	

Summary of History of Properties in Surrounding Area	
Direction	Past Surrounding Property Use(s)
North	Natural and agricultural land

Summary of History of Properties in Surrounding Area	
Direction	Past Surrounding Property Use(s)
East	Natural and agricultural land
South	Natural and agricultural land
West	Natural and agricultural land / Town of Wallula, WA

Facilities of potential environmental concern on the Property or in the vicinity are further discussed in Sections 5.2.1 through 5.2.8, below.

5.2.1 Aerial Photographs

Property / Vicinity	Observations
Property	1948: Shaw review an aerial photograph originally obtained from the University of Oregon Aerial Photography Library. The photo depicted the former location of the town of Wallula prior to relocation of the town to the northeast ahead of the rising waters of the newly formed Lake Wallula. The area east of the current location of Wallula and a portion of the Property is depicted as undeveloped natural land.
	1968: Shaw reviewed aerial photographs that depicted portions of the Property, east of the town of Wallula, WA, and east of the existing Boise mill property. The photographs depicted the Property as largely undeveloped natural land.
	1978: Shaw reviewed aerial photographs that depicted portions of the Property east of the town of Wallula, WA, as center pivot irrigated agricultural land. Property located east of the existing Boise mill property is depicted as largely undeveloped natural land.
	1989: Shaw reviewed aerial photographs that depicted portions of the Property east of the town of Wallula, WA, and east of the existing Boise mill property as cultivated agricultural land. Portions appear to be irrigated in a center pivot pattern, and other northern areas appear to be in a grid pattern.
	1996: The Property appears to be under cultivation in a similar manner as that observed presently. With the exception of the northern portion of the Property, the Property appears cultivated in grid-like shapes divided with apparent unimproved roads. The northern tip of the Property appears as non-irrigated land.
	2007: The northern portion of the Property appears not to be under current cultivation, although the outline of former center pivot irrigation tracks can be observed. The remainder of the Property appears to be under cultivation in a similar manner as that observed presently. The Property appears cultivated in grid-like shapes divided with apparent unimproved roads.
North	1968: Undeveloped natural land
	1978: Undeveloped natural land
	1989: Center pivot irrigation and grid pattern of agricultural cultivation.
	2007: Agricultural land and to the northwest Simplot feed lot.
East	1968: Undeveloped natural land
	1978: Undeveloped natural land
	1989: Under agricultural cultivation with center pivot irrigation pattern.
	1996: Under agricultural cultivation with center pivot irrigation pattern.
	2007: Under agricultural cultivation with center pivot irrigation pattern.

Property / Vicinity	Observations
South	1948: Undeveloped natural land.
	1968: Undeveloped natural land.
	1978: Undeveloped natural land
	1989: Under agricultural cultivation with center pivot irrigation pattern.
	1996: Under agricultural cultivation with center pivot irrigation pattern.
	2007: Under agricultural cultivation with center pivot irrigation pattern.
West	1968: The town of Wallula is present although somewhat less developed than what is present currently. The Boise Paper mill is present.
	1978: Photo appears similar to that of the 1968 photograph.
	1989: Photo appears similar to the 1978 photograph.
	1996: Photo appears similar to the 1989 photograph.
	2007: Photo appears similar to the 1996 photograph.

Historical aerial photographs were obtained from, or viewed at, the following sources:

- NRCS Office, Walla Walla, WA (1968, 1978, 1989 photos)
- Terra Server (1996)
- University of Oregon Photography Library (1948)
- Google Earth (2007)

5.2.2 City Directories

Based on the lack of address and agricultural nature of the Property, city directories were not available.

5.2.3 Property Tax Files

Year	Owner
2004	All six of the parcels that comprise the Property were transferred from Bose Cascade Corporation to Boise White Paper LLC.

Source:

• Walla Walla County, WA Assessors

5.2.4 Building Department Records

Given the lack of historical development at the Property; building department records were not reviewed. Walla Walla County Assessors records indicate no active building permit records for any of the six parcels comprising the Property.

5.2.5 Zoning/Land Use Records

Property / Vicinity	Description of Zoning / Land Use Records
Property	According to the Walla Walla County Zoning and Agricultural Lands of Significance map dated December 5, 2005, the southern parcels of the Property are zoned Primary Agricultural 40 acres. The northern parcels are zoned as Agricultural Industrial Light and fall within the Urban Growth Area Boundary for Attalia.
North	Agricultural Industrial Heavy
East	Primary Agricultural 40 acres
South	Primary Agricultural 40 acres
West	Primary Agricultural 40 acres although the Rural Activity Center Boundary for Wallula is identified.

Source:

• Walla Walla County Zoning and Agricultural Lands of Significance map, dated December 5, 2005

5.2.6 Historical Fire Insurance Maps

Given the rural nature of the Property, historical fire insurance maps are not available.

5.2.7 Historical Topographic Maps

Property / Vicinity	Observations
Property	The Property was depicted as undeveloped land
North	Undeveloped
East	Undeveloped
South	Undeveloped
West	City of Wallula

Name and year of historical topographic maps and source:

• USGS.7.50 Minute Topographic Map, Wallula, WA, OR Quadrangle, 1991, revised 1992

5.2.8 Other Historical Sources

Shaw reviewed Metsker Maps for the years 1931 and 1961 depicting portions of the Property as follows:

- 1931: The page (Page 5, Township 7 N., Range 31 E.W.M. Walla Walla & Benton Co's Wash.) depicts the Wallula area prior to the creation of Lake Wallula and the flooding of the eastern bank of the Columbia. The map depicts a portion of the Property located proximate to the largely developed towns of Attalia and Wallula. Section 13, the southern most section of the larger Property is identified as owned by the Attalia Land Co. Section 12 is largely identified as owned by the U.S., with the southeast quarter section owned by Harriet L.C. Cummings Estate. Section 1 is identified as owned by the Attalia Land Co. and Section 2 is owned by the N.P. RWY. Co. Other portions of the Property are not depicted. No development is depicted on the parcels except that a road extends from the town of Attalia through Section 12 and across the southern corner of Section 1. The northern portions of Sections 1 and 2 are depicted as subdivided into quarter sections.
- 1961: This page (Page 5, Township 7 N., Range 31 E.W.M. Walla Walla Co Wash.) depicts the Wallula area following creation of Lake Wallula and the flooding of areas west of Highway 12. Sections 13, 12, and 1 are all identified as owned by Louis F. Jausaud. Section 2 is listed as owned by N.P. RWY. Co.

6.0 Site Reconnaissance

Shaw's representative, D. Howe Gates, conducted a site reconnaissance of the Property and surrounding area. The objective of the site reconnaissance was to obtain information indicating the presence of RECs in connection with the Property.

6.1 Methodology

Shaw used the following methodology to observe the Property:

- Confirmed the definition of the Property boundaries with Mr. Alan Kottwitz, Supervisor of the cottonwood farm for Boise Paper.
- Escorted by Mr. Kottwitz via 4wd pickup around the outer Property boundaries and representative interior cross sections of the Property.

Shaw did not examine all areas of the Property. Photographs of the Property and adjacent properties are included as Appendix D to this report.

6.2 Site Reconnaissance Observations

6.2.1 Property Representative Escorting Site Assessor

Name of Property Representative and relationship to the Property	Company	Title	Years of Experience with Property and Other Site Qualifications
Alan Kottwitz	Boise Paper	Crop Production Supervisor, Cottonwood Fiber Farm	Approximately 15 years

6.2.2 Interior Observations

Shaw made the following interior observations during our site reconnaissance: None; there are no structures present on the Property.

6.2.3 Exterior Observations

Shaw made the following exterior observations during out site reconnaissance:

Issue	Comments
Hazardous materials or petroleum products	None observed or reported. All hazardous materials utilized on the premises, including various fuels to power motorized equipment or vehicles, fertilizers, herbicides, and pesticides, are maintained off site by contractors.

Issue	Comments
Hazardous waste	None with the exception of less than 5 gallons of oily waste material in an open pail improperly discarded by contractors at a location at the northern portion of the larger parcel of the Property, as depicted in Figure 2.
Solid waste	Evidence of on site disposal of solid waste was not observed with the exception of an area of apparent disposal by a contractor at a location at the northern portion of the larger parcel of the Property, as described above, and as depicted in Figure 2.
Wells	Ten water wells were reported to be present on the Property. All of the wells are utilized for irrigation of the cottonwood farm. Reportedly water quality is poor due to the presence of nitrates and not considered suitable as a potable water source. The approximate locations of the irrigation wells are depicted on Figure 2.
Process wastewater	None
Storm water	Storm water infiltrates directly into the ground surface or runs off the Property. No storm waster management systems were observed to be in place at the Property.
Drains, sumps, and drywells	None observed or reported
Odors	None
PCB-containing equipment	Pole mounted transformers were observed adjacent to irrigation wells and pump stations. All of the transformers are reportedly owned by the electrical utility. None of the transformer were marked as to PCB content. None of the observed transporters appeared to be leaking at the time of the site reconnaissance. According to a prior report provided for Shaw's review, upon acquisition of the Property Boise replaced existing electrical equipment. Equipment potentially containing polychlorinated biphenyls (PCBs) was tested for leaks and removed by contractors.
Pits, ponds, or lagoons; Property	A single poly lined water reservoir was observed at the Property to store irrigation water. The reservoir was located adjacent to Well #5. The reservoir had an approximately 10-acre-foot capacity.
Pits ponds, lagoons - adjoining properties	Waste water lagoons associated with the Simplot Feeders feed lot and packing plant are located adjacent to the northwestern corner of the Property. No pits, ponds, or lagoons were observed on other adjacent properties.
Stained soil or pavement	A small (less than 10 square feet) area of dark oily stained ground surface area was observed at the location of apparent disposal by a contractor as described above. Although the apparent waste materials and oily stained surface should be cleaned up, this condition is considered <i>de minimis</i> , and not representative of a REC.
Stressed vegetation	None observed
General exterior yardkeeping	Good

6.2.4 Underground Storage Tanks/Structures

Existing underground storage tanks (UST):	There were no existing on-site USTs reported or observed.
Former USTs:	There were no former on-site USTs reported or observed.

NOTE: Shaw's assessment of USTs included interviews with the Property Owner/Operator and visually apparent observations including repairs to pavement, vent pipes, ancillary equipment, and fill ports; as well as a review of readily ascertainable records relating to current and historical heating fuel sources and local and state records.

6.2.5 Aboveground Storage Tanks

Existing aboveground storage tanks (AST):	During the site reconnaissance, Shaw observed numerous empty poly-aboveground storage tanks located proximate to the 10 irrigation water wells on the Property. When in use during the growing season, the ASTs reportedly contained various mixtures of nitrogen and zinc fertilizers and water amendments to control scale accumulation on irrigation pipes.
Former ASTs:	There were no former on-site ASTs reported or observed.

NOTE: Shaw's assessment of ASTs included interviews with the Property Owner/Operator and visually apparent observations including repairs to pavement, tank pads and ancillary equipment, and spill containment berms; as well as a review of readily ascertainable records relating to current and historical heating fuel sources and local and state records.

6.2.6 De minimis Conditions

ASTM defines *de minimis* conditions as those that "generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies," i.e., minor soil staining. This assessment has revealed the following evidence of *de minimis* environmental conditions:

• Shaw identified a small area (less than 10 square feet) of dark oily stained ground surface at the location of apparent disposal by a contractor, as described above. Although the apparent waste materials and oily stained surface should be cleaned up, this condition is considered *de minimis*, and not representative of a REC.

7.0 Interviews with Owners/Operators, and State/Local Representatives

During the course of this assessment, Shaw interviewed or attempted to interview the following individuals.

7.1 Current Owner Interview

Mr. Alan Kottwitz, Crop Production Supervisor of the Cottonwood Fiber Farm and representative of Boise Paper, the Property owner, was interviewed on February 15, 2007. Based on these discussions, Shaw learned the following:

- Mr. Kottwitz stated that he was unaware of any pending, threatened, or past:
 - Litigation relevant to hazardous substances or petroleum products in, on, or from the Property;
 - Administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Property; or
 - Notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.
- Mr. Kottwitz was unaware of other potential environmental risks.

7.2 Current Operator Interview

Name	Title and Relationship to Property	Company Name	Telephone	Knowledge of litigation, administrative proceedings, or environmental regulatory violations/liabilities	Comments, including year(s) involved with the Property
Mr. Alan Kottwitz	Crop Production Supervisor, Cottonwood Fiber Farm	Boise Paper	(509) 544-6537	None	Mr. Kottwitz has been employed at the Property for approximately 15 years. The Property has been utilized for cottonwood production for a similar period of time, prior to which the Property was cultivated land (potatoes, peas).

NOTE: To ascertain Operator knowledge of environmental issues, Shaw asked each person interviewed the following question: Are you aware of any pending, threatened or past litigation relevant to hazardous substances or petroleum products in, on, or from the Property; administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Property; or notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

7.3 Past Property Owner and Operators Interviews

Past property owners or operators were not interviewed as part of this assessment.

7.4 Local Government Officials

No local government officials were interviewed as part of this assessment.

7.5 State Government Officials

No state government officials were interviewed as part of this assessment.

7.6 Others

No additional persons likely to be knowledgeable of the environmental condition or history of the Property were identified or interviewed.

8.0 Other Environmental Considerations

Shaw was not asked to investigate other non-scope considerations, as defined by ASTM E 1527	7.

9.0 Historical Recognized Environmental Conditions and de Minimis Conditions

This assessment has revealed no evidence of historical RECs in connection with the Property.

Shaw did identify the following *de minimis* condition:

• Shaw identified a small area (less than 10 square feet) of dark oily stained ground surface at the location of apparent disposal by a contractor, as described above. Although the apparent waste materials and oily stained surface should be cleaned up, this condition is considered *de minimis*, and not representative of a REC.

10.0 Conclusions and Recommendations

10.1 Conclusions

Shaw has performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527 of the approximate 1,894-acre Boise Paper Cottonwood Fiber Farm in Wallula, WA (the Property). Any exceptions to, or deletions from, this practice are described in Section 2.0 of this report. This assessment has revealed no evidence recognized environmental conditions in connection with the Property.

10.2 Recommendations for Additional Investigation

Based on the findings of this Phase I ESA, Shaw does not recommend additional investigation to detect the presence or likely presence of hazardous substances or petroleum products.

Appendix A

Qualifications of Environmental Professionals

D. Howe Gates

Professional Qualifications

Mr. Gates has 23 years of diversified professional experience in the fields of environmental consulting, environmental health, and environmental management. During this time, Mr. Gates has been employed as an Environmental Health Officer, Hazardous Waste Specialist, and Supervising Hazardous Waste Specialist for county environmental health departments; as a Senior Environmental Specialist in the solid waste management industry; and in the environmental consulting industry for the past 16 years. In addition to his technical skills, Mr. Gates has extensive experience in personnel supervision, business development, client management and project management. Specific project experience includes environmental due diligence investigations (Phase I & Phase II environmental site assessments), hazardous waste investigations, regulatory reviews, underground storage tank (UST) regulatory audits, UST closure investigations, and utility asset (substation) inspection and evaluations.

Education

Registrations/Certifications/Licenses

Environmental Health Specialist, 1985, 4922, Active, California, 12/2007 Registered Environmental Assessor I, 1998, 02191, Inactive, California

Experience and Background

08/2006 - Present

Client Program Manager 2, Shaw Environmental & Infrastructure, Inc., Vancouver, Washington

As a Senior Manager for the Due Diligence practice, Mr. Gates has both regional and national responsibilities. Mr. Gates is currently the Northwest Due Diligence Program Manager for Shaw Environmental & Infrastructure based on Vancouver, Washington and account manager for several large high-volume clients requiring due diligence services on a national basis. Mr. Gates is also a key member of the Shaw National Due Diligence Network. Mr. Gates has coordinated and managed over 600 Phase I and Phase II investigations annually for the past five years.

03/1996 - 08/2006

Principal Scientist, SECOR International Inc, Portland, Oregon

Mr. Gates served as a member of the management team for SECOR's Real Estate and Financial Services (REFS) Business Line. In this role, Mr. Gates was National Account Manager for SECOR REFS's two largest clients. Total revenue for client related projects neared 2 million dollars in fy 2005.

In his capacity as National Account Manager, Mr. Gates was responsible for all aspects of client management, including business development and sales; quality assurance and quality control; accounts receivable; supervision, mentoring, and training of REFS dedicated staff; and client training. In addition, Mr. Gates was responsible for overall day-to-day operations including responding to requests for proposal, report preparation, and report review.

01/1994 - 02/1996

Senior Environmental Professional, Cascade Pacific Engineering, Portland, Oregon

Responsibilities included business development, project management and senior review of environmental assessment and environmental compliance projects in the Pacific Northwest and Canada.

01/1992 - 01/1994

Project Manager/Environmental Scientist, PTI Environmental Services, Portland, Oregon

Responsibilities included business development, project management and senior review of environmental assessment and environmental compliance projects in the Pacific Northwest

01/1991 - 01/1992

Manager, Preliminary Site Assessment Program and Project Manager, Dames & Moore, Portland, Oregon

Responsibilities included business development, project management and senior review of Preliminary Site Assessment and environmental compliance projects in the Pacific Northwest.

09/1990 - 12/1991

Senior Project Manager, SRH Environmental Management, Inc, Portland, Oregon

Responsibilities included business development, project management and senior review of environmental assessment and environmental compliance projects in the Pacific Northwest.

01/1990 - 09/1990

Project Manager, ENSR Consulting & Engineering, Inc, Irvine, California

in progress....

12/1988 - 01/1990

Senior Environmental Specialist, Waste Management of North America, Inc, Irvine, California

Coordinated regional implementation of corporate environmental policy; specifically management of special waste program for the Western Region. Duties included staff training at WMNA facilities, review of special waste applications, and project management of various underground storage tank and remediation projects in the region.

11/1986 - 12/1988

Supervising Hazardous Waste Specialist, County of Orange (California) Health Care Agency, Environmental Health Division, Hazardous Materials Program, Santa Ana, California

in progress...

11/1985 - 11/1986

Hazardous Waste Specialist I & II, County of Orange (California) Health Care Agency, Environmental Health Division, Hazardous Materials Program, Santa Ana, California

Under direction from the Supervising Hazardous Waste Specialist in the hazardous waste and underground storage tank program, Mr. Gates implemented California hazardous waste and underground storage tank laws and regulations. Primary duties in the underground storage tank (UST) program included: the direction of sampling activities at UST closures, review and approval of site-assessment plans and proposals for remedial action, evaluation of leaking UST site-closure plans for completeness, plan review for new UST installation, construction inspections, development of enforcement actions and routine inspections of UST facilities.

04/1983 - 11/1985

Environmental Health Officer I/II, County of Santa Barbara (California) Health Care Services, Santa Barbara, California

Duties included implementation of general environmental health program activities, including inspection of: restaurants, retail food facilities, recreational bathing facilities (public pools & spas), detention facilities. Plan check and construction inspections of new food establishments and recreational bathing facilities. Other major duties included development of enforcement actions, vector control, housing inspections, complaint investigations, and food-borne illness investigations. Upon registration as a Registered Environmental Health Specialist with the State of California Department of Health Services promoted to Environmental Health Officer II in March 1985.

Megan S. Coracci

Professional Qualifications

Ms. Coracci has over ten years of experience focused in environmental assessment and due diligence investigations, asbestos inspections, and project management experience. Ms. Coracci specializes in the environmental due diligence of real estate, including industrial and commercial properties. She has provided environmental site assessment (ESA) support various national clients, having performed or coordinated over 1,500 Phase I ESAs and related risk management services.

Education

Bachelor of Science, Environmental Science, University of Arizona, Tucson, Arizona, 1997

Additional Training/Continuing Education

8-Hour OSHA Health and Safety Annual Certification, 2006 Internal Mold Consulting Seminar, SECOR, 2003 Wetlands Delineation Program, Wetlands Training Institute, 1999 40-Hour OSHA Health and Safety, 1998

Registrations/Certifications/Licenses

Asbestos Building Inspector, 2007, 07-1007, Active, Nationwide, 01/2008 Environmental Assessor, 2007, 08166, Active, California, 06/2007 Asbestos Management Planner, 2007, Inactive, Nationwide, 01/1998

Experience and Background

07/2006 - Present

Project Manager, Shaw Environmental & Infrastructure, Inc., Portland, Oregon

Ms. Coracci is a Project Manager specializing in environmental due diligence of real estate, including industrial and commercial properties. Clients supported include local and national real estate and financial services clients.

02/1999 - 07/2006

Senior Environmental Scientist, SECOR, Portland, Oregon

Served as client manager for a SECOR Tier One (>1mm revenue annually) client, performing day-to-day operations including responding to requests for proposals, preparing and reviewing reports, interacting with clients on a daily basis and supervising staff. Managed over 600 Phase I ESAs per year, nationwide. Also supervised field staff, reviewed reports, and interacted with clients. In addition, conducted aspects of peer reviews, closure reports, SPCC plans, and asbestos inspections, lead based paint inspections, and agency record reviews.

01/1998 - 01/1999

Environmental Scientist, EnviroEngineering, Inc., Tucson, Arizona

Performed Phase I ESAs, Phase II ESAs, and asbestos inspections. Conducting limited subsurface investigations, assisted with quarterly groundwater monitoring sampling events, soil sampling, and groundwater monitoring well installations. Also assisted in the preparation of an Environmental Impact Statement for the proposed construction of a military installation by a US company in Thessolinki, Greece.

08/1997 - 12/1997 Intern, Terracon, Tucson, Arizona

Accompanied employees of Terracon on Phase I site visits, underground storage tank removals, subsurface investigations, and other projects to understand the nature of the environmental construction industry while completing undergraduate degree.

The following is a summary of key projects:

Manages over 500 Phase I Environmental Site assessments per year nationwide, including supervising field staff, reviewing reports, and client interaction.

Has managed the completion of numerous due diligence portfolios of up to 50 sites completed within a required three week time frame. Responsibilities include staffing, supervision and mentoring, report review, and client interaction.

Completed environmental due diligence services, including review of over 2,000 prior ESA reports, for national investment company considering purchase of multi-billion dollar real estate portfolio.

Served as a Project Manager for asbestos sampling projects nationwide.

Completed Phase I Environmental Assessments of hundreds of commercial and industrial facilities located throughout the United States.

Provided oversight for the removal of underground storage tanks (USTs) and evaluated treatment/disposal alternatives for contaminated soil for a former gas station in Tucson, Arizona. Installed soil borings and monitoring wells to assess potential impact to groundwater. Prepared site closure petition.

Conducted a Phase I ESA and assisted in the development of a Phase II Sampling plan for a 49-acre former jet engine manufacturing and testing facility in Torrance, California. Researched environmental records, reviewed files, communicated with facility managers and local environmental agencies, and wrote report.

Developed a sampling and analysis plan using EPA Guidance Document SW-846 to produce the analytical data required for completion a Solid Waste Permit Exemption Application for a steel casting facility in Portland, Oregon.

Collected stream water samples for petroleum product analysis over a period of 48-hours at the site of a gasoline tanker overturn on an Indian reservation in Warm Springs, Oregon.

Conducted a Phase I ESA for a thirty-two-story high-rise apartment complex in downtown Minneapolis, Minnesota. Conducted site visits, researched environmental records, and wrote report.

Performed Limited Environmental Assessments for multiple oil change facilities throughout the Portland Metropolitan area.

Served as Project Manager for quarterly groundwater monitoring of a former gas station facility in Salem, Oregon. Following the final quarterly monitoring, Ms. Coracci prepared the site closure report and submitted the final closure documentation and groundwater monitoring results to the Oregon Voluntary Cleanup Program (VCP) to obtain a no further action letter.

Conducted Environmental Assessments for Distributor Transfers of five diesel engine repair and maintenance sites in Louisiana, Arkansas, Mississippi, and Tennessee. Conducted site visits, researched environmental records, and wrote reports.

Regulatory Database Assessment Criteria

The purpose of the regulatory agency environmental database review was to identify reported environmental issues for the Property and other properties in the vicinity. The database search criteria included the approximate minimum search distances specified in the Scope of Work described in Section 2.0. The descriptions of the databases searched and the associated search distances from the Property are identified in the regulatory agency database search report presented in Appendix F.

The database search report lists a number of sites identified as "unmappable." The database search firm was unable to confirm the physical locations of these sites relative to the Property or to assess whether they were located within the designated search radii. Shaw Environmental, Inc. (Shaw) independently reviewed the locations of these "unmappable" sites, to the extent possible, using various maps and our knowledge of the Property area. Any of the "unmappable" sites determined to be within the designated search radii were included in our evaluation of the various listed sites potential to result in a recognized environmental condition relative to the Property.

Shaw evaluated each reported site identified in the regulatory agency database search report with respect to the nature and extent of the release, the distance of the site from the Property, the stratigraphy of soils, the expected soil permeability, and the topographic position of a reported release site with respect to known or expected local and/or regional groundwater flow direction. Reported release sites located within ¼-mile upgradient or ¼-mile cross-gradient or adjacent downgradient are considered to have a potential to have impacted the Property and were further assessed by reviewing agency records and/or interviewing agency personnel.

Statement of Limitations

The conclusions presented in this report are professional opinions based on data described in this report. These opinions have been arrived at in accordance with currently accepted environmental industry standards and practices applicable to the work described in this report. The opinions presented are subject to the following inherent limitations:

- 1. This report was prepared for the exclusive use of the entity referenced in Section 1.0, the User. No other entity may rely on the information presented in the report without the expressed written consent of Shaw. Any use of the Phase I ESA report constitutes acceptance of the limits of Shaw's liability. Shaw's liability extends only to its client and not to any other parties who may obtain the Phase I ESA report.
- 2. Shaw derived the data in this report primarily from visual inspections, examination of records in the public domain, and interviews with individuals having information about the Property. The passage of time, manifestation of latent conditions, or occurrence of future events may require further study at the Property; analysis of the data; and reevaluation of the findings, observations, and conclusions in the report.
- 3. The data reported and the findings, observations, and conclusions expressed in the report are limited by the scope of work that were performed within the approved time and budgetary requirements. The scope of work is presented in Section 2.0 and was agreed to by the client.
- 4. Shaw's Phase I ESA report presents professional opinions and findings of a scientific and technical nature. The report shall not be construed to offer legal opinion or representations as to the requirements of, or compliance with, environmental laws, rules, regulations, or policies of federal, state, or local governmental agencies.
- 5. This report is not a definitive study of contamination at the Property and should not be interpreted as such. Unless indicated to the contrary in Section 2.0, an intrusive assessment of subsurface soil, groundwater, or other environmental media was not performed as part of this investigation,
- 6. This report is based, in part, on unverified information supplied to Shaw by third-party sources. While efforts have been made to substantiate this third-party information, Shaw cannot guarantee its completeness or accuracy.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site: it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/10/2006 has revealed that there is 1 CERC-NFRAP site within the searched area.

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/13/2006 has revealed that there is 1 RCRA-LQG site within the searched area.

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/13/2006 has revealed that there is 1 RCRA-SQG site within the searched area.

Other Pertinent Environmental Activity Identified at Site

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

WA-DOEFSIS (Washington - Department Of Ecology Facility / Site Identification System) is the Department of Ecology's Facility/Site identification system that provides a means to query and display data maintained by the Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the departments Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/27/2006 Source: EPA
Date Data Arrived at EDR: 11/01/2006 Telephone: N/A

Number of Days to Update: 21 Next Scheduled EDR Contact: 04/30/2007
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL RECOVERY: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Source: EPA

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994 Number of Days to Update: 56

Next Scheduled EDR Contact: 05/21/2007 Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/28/2006 Date Data Arrived at EDR: 12/19/2006 Date Made Active in Reports: 01/29/2007

Number of Days to Update: 41

Next Scheduled EDR Contact: 03/19/2007 Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

STATE AND LOCAL RECORDS

CSCSL: Confirmed & Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

CSCSL NFA: Confirmed & Contaminated Sites - No Further Action

The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

COUNTY RECORDS

KING COUNTY:

Abandoned Landfill Study in King County

The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department's Environmental Health Division at the request of the King County Council. The primary objective of the survey was to determine if any public health problems existed at the predetermined 24 sites.

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary

and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are

comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center ListingSource: Department of Social & Health Services

Telephone: 253-383-1735

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.
